# Will Telemedicine become successful after COVID-19?

Opportunities and Challenges

# Types of Telemedicine

## Live Video Conferencing

- Patient and healthcare provider use two-way conferencing for real-time consultations.
- Often used to treat common illnesses, assist with triage decisions and with psychotherapy sessions.

## Store-and-Forward (Asynchronous transfer)

- Patient's record or data is transmitted to a healthcare provider electronically for treating patient outside of real-time.
- Commonly used in rural areas for primary care providers to send data to specialists at another location for consultation and analysis.

## Remote Patient Monitoring (RPM)

- Patient's health and medical data is sent in real-time for monitoring.
- Effective in the senior health industry.

## Mobile Health (mHealth)

- Use of any mobile communications device, as well as software applications to support healthcare.

# Driving Forces of Telemedicine Rise

- **Patient acceptance**

- Pandemic make virtual visits on telemedicine platforms have become the safe and convenient solution
- Patients were able to gain access to medical advice and treatment without any risk of contracting the virus

- **Government support**

- Pandemic cleared the benefits of digital health platforms
- Governments quickly made digital health platforms available to the general public

- **Insurer acceptance**

- Many insurers quickly added telemedicine services to standard policies
- Multiple insurers across the region now have set up special partnerships with telemedicine platforms to sponsor free consultations.

# Why Stakeholders Accept It?

## **Providers:**

### **Serve patients more effectively.**

Integrate offline / online care to deliver better patient experiences and lower the cost of care.

Use telemedicine for add-on services such as drug delivery, appointment scheduling, electronic records management and ongoing monitoring of conditions.

## **Payers:**

### **Improve plans / performance**

Develop partnerships with digital insurgents to create differentiated healthcare plans, while lowering cost of care

Harness patient data and analytics to improve pricing and claims management

## **Regulators:**

### **Foster public health objectives.**

Improve access to healthcare and the quality of patient outcomes, allowing patients in remote areas with urgent care needs to see physicians rapidly.

Take advantage of new services and data ecosystems in healthcare policy decisions.
